

Open Educational Resources and interdisciplinary Academy

Education & Training

The NFDI4Earth education & training team aims to enable widespread uptake of **NFDI4Earth** for earth system scientists to conduct **Open** and **FAIR** research.

-  We **aggregate** and **develop** open modular course material and curricula
-  We **fund** the ESS community to create educational content through annual **calls for educational pilots**
-  We make all the educational content available via a **training portal**
-  We organize **education and training events** for domain-specific skill building
-  We establish **Edu-Hubs** that collaborate with the NFDI4Earth User Support Network

Browsing and discovering Earth System Data science training resources and events and follow the NFDI4Earth curriculum

Establishing an open network of hubs for the sustainable development of ESS competencies.

Academy

The NFDI4Earth Academy is a vibrant research and learning network of **Early Career Scientists** integrating **Earth System** and **Data Science**.

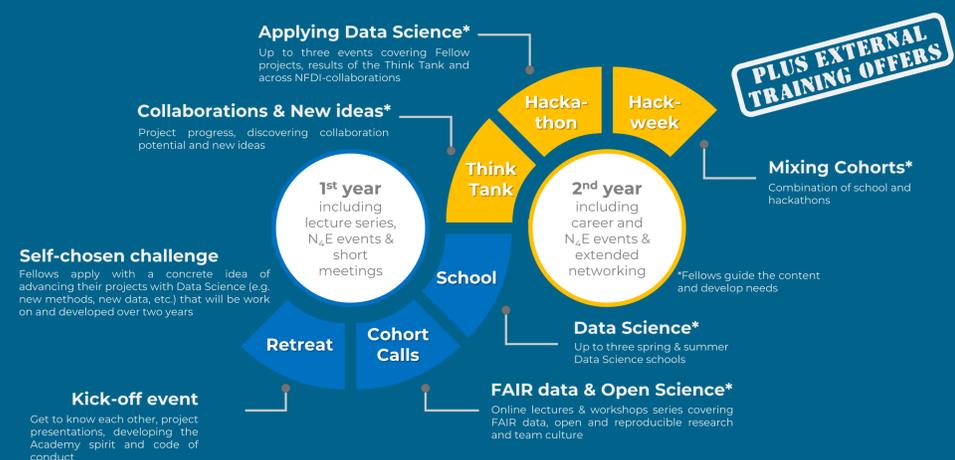

Think Tank

Networking

Data Science

Overview of our two year-program. In our first virtual events ("Cohort Calls"), the Fellows will develop a individual roadmap to help them prioritize their next steps towards open and reproducible science.
